Sustainable

Inspired by the West

Our Catering Partner **MASTER CHEFS**

We are proud to have Master Chefs as our official catering partner to Connacht Rugby and Dexcom Stadium.

Master Chefs is an independently owned Irish contract and event catering company who are industry leaders in sustainable practices and fully committed to a goal of becoming a zero waste enterprise as they continue to champion their organic Ellan Farm and local producers.

ELLAN FARM

Organically Grown Produce

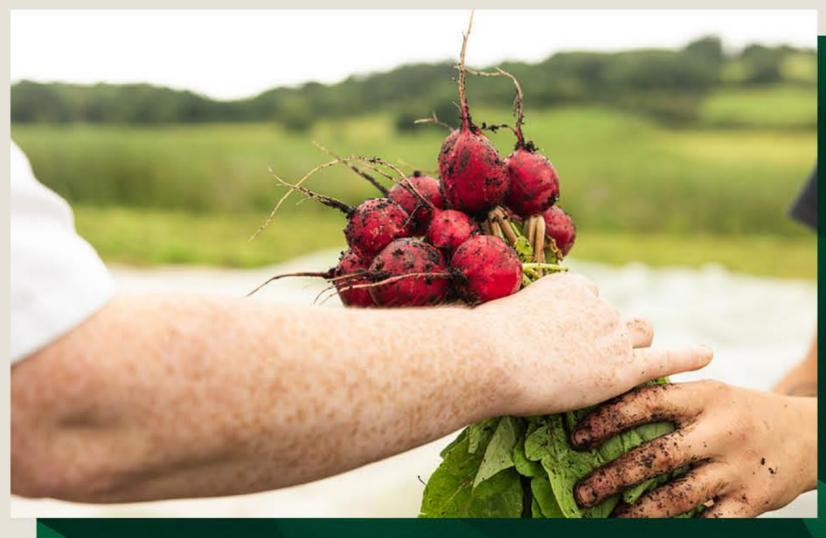

Ellan farm is Master Chefs commitment to doing food better.

It's a purpose built 20 acre organic farm designed to close the loop on how food is grown, served and returned to the land. Born from a passion for sustainability and innovation, Ellan Farm helps to reimagine what catering and events can look like to protect our future and our planet.

At the heart of Ellan Farm is their Farm to Fork philosophy.

Everything we grow is used in our kitchens and events – any food waste is returned to the farm to be composted through the on-site bio digester. That compost is then carefully segregated: some is used on the farm under IOA Organic Guidelines, and the rest is available for collection by others to use on their own farms or in their gardens. It's an expertly led sustainable cycle.

Master Chefs are building more than a farm, they have created a hub for learning, inspiration and community.

The team at Ellan Farm offer educational farm tours for schools, students, commercial partners, clients and corporate groups. It's all part of the goal to bring people closer to their food – and to the land that it is grown on.

ORGANICALLY GROWN PRODUCE

Master Chefs seasonal vegetables are grown to the highest standards, free from chemicals or unnecessary intervention resulting in produce of the highest quality. Whether it is served to you for breakfast or a gala dinner every bite reflects our joint commitment to transparency, sustainability and flavour.

The journey begins in the greenhouse, where seeds are propagated and each crop is carefully planned according to seasonal demand and the needs of the kitchen. Once ready, the seedlings are planted across organic fields and carefully tended to maturity. When it's time to harvest, the produce is brought to the purpose – built processing facility located on the farm. There, it is washed, cut prepared for immediate use in the kitchen, ensuring freshness, quality and minimal waste.
